

Vesko Vasilev

senior full-stack engineer · typescript · node.js · react

Troyan, Bulgaria · open to senior full-stack roles, remote or EU · payvesipal@gmail.com · github.com/becuhkyy · linkedin.com/in/vesko-vasilev-a49795127 · veskov.dev

SUMMARY

Twelve years keeping other people's servers alive, now building the software that runs on them. I moved from running production infrastructure to shipping production software and brought the instincts with me: typed APIs, migrations that survive a rollback, deploys nobody has to stay awake for. Sole engineer behind the Bulgarian Volleyball Federation's electronic licensing system, in production since 2025, and its competition platform, delivered for the 2026/27 season; lead engineer on the systems running the Nota Bene pharmacy chain and its compounding laboratory.

EXPERIENCE

Full-Stack Engineer (Contract)

Dec 2022 - present

Bulgarian Volleyball Federation · remote

- Sole engineer behind the federation's entire software estate and the vision for its digital development: I conceive the systems, own the architecture, and ship end to end.
- Advisor on every digital decision the federation takes: I report directly to the administrative director, and proposals go from there to the board.
- Shipped the electronic licensing system behind db.bvf.bg and the public register on bvf.bg: 185 endpoints, 1,383 backend tests with a hard 100% coverage gate. In production since 2025.
- Delivered the competition platform that digitalises the federation's championships: schedule generation, standings, match bulletins. Its prototype scheduled the Hemus region's 2025/26 season; it launches with the 2026/27 season.

Lead Full-Stack Engineer (Contract)

Oct 2024 - present

Nota Bene pharmacy chain · remote

- Lead the four-person team digitalising the chain: I scope the projects, own delivery, and write some of the code.
- Shipped the compounding laboratory's journal: lab staff process orders and track progress, patient and doctor files, automatic label printing through a custom print server, Speedy courier integration, and management reports on volumes, turnover and top prescribing doctors.
- Shipped the cash-flow book spanning registers, safes and transfers across shops, a REST service over the legacy Firebird pharmacy databases, and a bot that babysits a flaky national export.
- Rolled both systems out across the chain's 50 pharmacies and 400+ employees single-handedly.

Senior System Administrator

Jan 2014 - Aug 2026

Nodisto IT, LLC (VPSDime · Backupsy · Winity) · remote

- Four people, 200+ hypervisors, 10,000+ virtual machines, six data centers, three VPS brands. The job was making that ratio look easy.
- Replaced SolusVM with an in-house Go orchestrator fully integrated with WHMCS, fronted by a self-service control panel that let customers fix their own problems at 3am.
- Held a 15-minute response time, 24/7/365, by turning monitoring into reports and automated WHMCS actions.
- Stopped fraud at the door: automated order review with checkout telemetry, FraudRecord, MaxMind and FraudLabs scoring, and address and email verification.
- Automated OS and application template builds for the entire fleet, and wrote the knowledgebase customers actually read.

Co-Founder

2016 - 2023

ImpactHost Ltd. · Bulgaria

- Co-founded a cloud provider selling resource pools customers carve into their own virtual machines; grew it to 1,500+ customers at peak and sold it into AlphaVPS.
- Stood up the physical platform from zero: server procurement and logistics, rack mounting, hypervisor deployment. Set up billing, the SolusVM control panel and the backup infrastructure.

Chief Operations Officer

Nov 2013 - Aug 2022

AlphaVPS (DA International Group Ltd.) · remote

- Nine years, every rung of the ladder: joined at inception as a junior sysadmin, left as COO of a VPS provider with infrastructure on multiple continents.
- Led the tech support team and owned onboarding, processes and daily operations end to end while the platform scaled from a first server to a global footprint.
- Hands on the metal: racked every server and ran every cable in the company's Sofia datacenter myself.

Regional Coordinator

Sep 2023 - May 2025

Bulgarian Volleyball Federation, Region Hemus

- Bulgaria's largest volleyball region by area and clubs (27), covering the northwest: small clubs, tight budgets, long travel, few matches, last place among the regions.
- Designed hybrid championship formats that maximise matches played while minimising travel: teams now play 60% more matches for the same average distance travelled, and Hemus has climbed from last to 4th in the national ranking.
- Built tooling as I went: a Google Distance Matrix app that picks optimal hosts by real road travel, and the first .doc bulletin generator. The domain knowledge became the federation's competition platform.

President & Manager

Oct 2018 - present

VC Troyan Volley (part-time) · Troyan

- Run a non-profit club with 110+ athletes competing in 12 of 14 national age groups: funding, logistics, and a full season calendar.

SELECTED PROJECTS

bvf-registry

db.bvf.bg

c# / .net 10 • ef core • sql server • react 19 • tanstack query

The federation's electronic licensing system: clubs, players, coaches, licences, transfers, halls and season applications, feeding the admin SPA at db.bvf.bg and the public register on bvf.bg. 185 endpoints across 18 controllers; 1,383 backend tests behind a hard 100% coverage gate; 755 frontend tests. Led a .NET 9 to 10 production migration with proven OpenAPI parity. In production since 2025.

bvf-competitions

private, delivered

typescript • react 19 • strapi 5 • playwright

The federation's competition platform, single source of truth from season down to match: FIDE-verified Berger schedule generation, playoff brackets, standings under official BVF rules, and .docx match bulletins emailed to clubs. 90,000 lines of TypeScript, 622 automated tests with end-to-end specs for every feature. The prototype scheduled the Hemus region's 2025/26 season: 9 championships, 11 groups, 28 matches, 14 bulletins.

bvf-livescore

part of the competition platform, private

typescript • react 19 • pwa • vitest

Court-side live scoring PWA for match secretaries: token-guarded match links, offline-tolerant, full FIVB indoor and beach rules on a dependency-free, event-sourced scoring engine.

bvf-distances

locations.veskov.dev

typescript • react 19 • node.js • express • sqlite

Picks the optimal host for a tournament round: Google Distance Matrix over the region's clubs, minimising total real road travel, with the routes drawn on a map. Built in two days for the Hemus region.

notabene-journal

client work, private

strapi 5 • mysql • react 19 • tanstack start

Journal for Nota Bene's compounding laboratory: order processing and progress tracking for the lab staff, patient and doctor files, automatic label printing through a custom print server, Speedy courier integration, and reports on volumes, turnover and top prescribing doctors. In production across the chain.

notabene-cashbook

client work, private

next.js • prisma • postgresql • opentelemetry

Built to catch missing cash: every employee tracks their shift, reporting register amounts at start and end, and the software reconciles them against expected takings from sales. Grew with the client: pharmacy schedules, payroll, social security and bonus calculators, per-pharmacy and per-employee cost tracking, training modules, and turnover, profit and productivity reports.

notabene-axp-service

client work, private

nestjs • typescript • firebird • mysql

REST service exposing the chain's legacy Firebird pharmacy databases: sales summaries, NZOK and profit reports, behind a central pharmacy registry. Runs in production as a Windows service.

notabene-nwa-bot

client work, private

python • selenium • sqlite

A stubborn Python bot that retries the flaky national NWA export hourly through the night, validates every pharmacy made it in, imports the best run and emails the outcome.

pushdb

private, work in progress

typescript • tanstack start • postgresql • docker • kubernetes

Database backup orchestration SaaS, born from running backup-heavy hosting infrastructure for a decade. Monorepo with a web app, a scheduler and a worker, containerised and deployed to Kubernetes.

SKILLS

languages	TypeScript, C#
frontend	React 19, Next.js, TanStack, shadcn/ui
backend	Node.js, NestJS, .NET, GraphQL, Kafka
databases	PostgreSQL, MSSQL, Prisma
devops	Docker, Kubernetes, GitHub Actions
virtualization	KVM, Proxmox, Incus, OpenVZ
systems	Linux, Nginx, Apache
tooling	Vitest, Git, Neovim, Bash, Terraform, Ansible

COMMUNITY AND AWARDS

2024	2nd place, Hedera Hackathon. Kanban 3.0: an AI product-owner assistant that turns a ten-question discovery chat into a fully created kanban project, with automatic HBAR payouts over Hedera Consensus Service when a card lands in Complete. Team of two, built on a Planka fork.
ongoing	Mentor, Teenovator. Mentoring student teams shipping their first product.

LANGUAGES

bulgarian	native
english	full professional proficiency
